Numerous varieties of tomato are widely grown in temperate climates across the world, with greenhouses allowing its production throughout the year and in cooler areas. The plants typically grow to 1–3 meters (3–10 ft) in height and have a weak stem that often sprawls over the ground and vines over other plants. It is a perennial in its native habitat and grown as an annual in temperate climates. An average common tomato weighs approximately 100 grams (4 oz). Tomato is consumed in diverse ways, including raw, as an ingredient in many dishes, sauces, salads, and drinks.
